

# Demico solution

Title	Demico solution
<b>Description of the technology</b>	Demico solution represents a new approach to storing and transport of cereals. The new approach involves the treatment of storage areas (silos – lying or transporting) in order to prevent the formation, expansion and neutralization of existing mycotoxins produced as mold metabolism products. At the same time, the treatment creates conditions that significantly increase the safety of explosive storage resulting from the large concentration of grain dust and air (O <sub>2</sub> ).
<b>Advantages</b>	<ul style="list-style-type: none"><li>• new approach to storing and transport of cereals</li><li>• significantly increase the safety of storage from explosion</li></ul>
<b>Keywords</b>	Improved storing and transport of cereals
<b>Form of cooperation</b>	sale to end-user
<b>Language of communication</b>	English, Serbian
