

# farmee.OS

<b>Title</b>	Farmee.OS Smart farming
<b>Technology deployment</b>	farmee.os is the operating system for smart farms. It's super easy to install, maintain and makes the most of state-of-the-art technology. It will always be free-to-use for small-scale farming.
<b>Comments</b>	farmee was instigated by a group of friends and entrepreneurs, all having founded other companies prior to farmee. We're in love with technology, software and plants. We're gathering knowledge and hunting for innovation, to help you grow.
<b>Key words</b>	urban farming, sensor- and software-driven farming,
<b>Regarding Stage of Development</b>	<ol style="list-style-type: none"><li>1) Create a plant growing recipe database for different environments, in a standardized format.</li><li>2) Provide a farm, greenhouse and garden operating system that is independent from farm size or growing methods.</li><li>3) Create a standardized interface to automate farming tasks and develop custom hardware modules.</li><li>4) Use data analytics, machine learning and AI technologies to optimize farming methods and prevent plant diseases.</li><li>5) Create a new sustainable way of food and crop production ultimately enabling food sovereignty.</li></ol>
<b>Possible client</b>	private and commercial gardeners, urban farming businesses, private individuals
