

Floating islands for water treatment

Title	Floating islands for water treatment
Description of the technology	<p>Floating Islands also called floating treatment wetlands provide natural water quality improvement and add beauty to any waterscape with colourful native and selected plant species. Ready to install components, available in natural shapes, offer a cost effective and attractive focal point to the waterscape, supporting natural, maintenance-free ecological water restoration processes.</p> <ul style="list-style-type: none">• Floating islands will certainly improve water quality in water tanks and reservoirs• The device is installed so that all the water from the tank flows through the floating island• The positive response of the population (humans and animals) and the improvement of biodiversity are side positive added values
Keywords	Water treatment, Water treatment plant, Wetland plants, Floating island
Stage of Development	Development from prototype to final product
Language of communication	English, Czech, Slovak
Possible client	Households and municipalities, owners of reservoirs or tanks
Contact point	nemcova.m@fce.vutbr.cz
Notice	<i>Project co-funded by European Union funds (ERDF and IPA)</i>
