

HySiLabs - the innovative hydrogen carrier

Description of your eco-technology	In the course of reducing emissions, hydrogen is foreseen to be a key player in a future low-carbon economy. Storage and delivery of hydrogen in its gaseous form is problematic because of handling and safety issues. HySiLabs developed an innovative solution to facilitate hydrogen (H ₂) transportation, by charging and releasing hydrogen in a unique liquid carrier (HydroSil).
Further information	The technology that revolutionizes the transport of hydrogen.
Form of cooperation	Industrialization of the process & cooperation with major players in energy and mobility
Keywords	new energy forms, hydrogen transportation
Language of communication	French, English
More information	Email: contact@hysilabs.com Website: http://hysilabs.com/
