

K-TIME

K-TIME

Description

K-TIME is a mobile application designed to keep records of the presence of employees at work that is fully managed through the JUST CUBE Internet Information System (ERP Cloud platform). It has wide possibilities for defining different work plans and schedules. It is mostly highlighted by a detailed graphic of the events and calculations that allow insight into the events and structure of the presence. User interfaces and operating procedures are for current and current records - data are processed in real time. Adaptability to different user needs is ensured by a variety of configurable parameters, schedules, calendar events that can be adapted to different accounting rules.

K-TIME allows:

- monitoring of working hours
- preparing data for accurate billing

PLANNING OF WORKING TIME

Employee scheduling is a complex process that does not offer a single or simple solution. Several aspects of scheduling and shift planning are covered by the K-TIME system using billing tools.

ANALYTICS

You can use data from working time records to show key performance indicators of employee time management.

Product	<p>We produce design furniture, luminaires and accessories from quality recycled cardboard. We believe in ecology and re-use materials because we are eco-friendly and we don't want to unnecessarily draw next row materials. Cardboard that we use is layered until we achieve excellent strength for new product. Cardboard is amazing material that deserves itself more than just using as a classic box. Our Kartoons furniture will become the centre of attention in your home or office. Whether you choose a wine rack, a table, a shelf or a seat you will immediately catch the attention of the guests and you have a great theme for start of the conversation. Moreover you will show to everyone in your neighbourhood that you are considerate to the nature arranging your rooms.</p>
