

System for delivery of articles sold in pharmacy store

System for delivery of articles sold in pharmacy store	
Description	We want a solution which will replace the current small plastic bags which are being given to customers in pharmacies to take articles bought in the store. Paper bags are not acceptable since they have been tested and did not get a good reaction from the customers.
Further information	At the same, one should have in mind that plastic bags are produced by the pharmaceutical companies producing drugs and are carrying marketing messages and are given to the stores for free. Hence, new solution shall be perfect if also has this facility.
Keywords	plastic bags, packaging, promotional material, customer service
Country	Bosnia and Herzegovina
