

# Wooden Furniture Care

<b>Title</b>	<b>Wooden Furniture Care</b>
<b>Technology description</b>	Wood is a precious, highly versatile natural and renewable material. With appropriate care and maintenance wooden products achieve superb longevity. In 1994, the Austrian Ministry of Sustainability and Tourism equipped its premises almost exclusively with wooden furniture. Up to now, maintenance, care, cleaning etc. are time- and work-intensive; and can only be performed in a staggered fashion. Therefore, the Ministry is looking for eco-innovative solutions that make furniture care or restoration physically less strenuous, more efficient, more ecological (cleaning agents) and more sustainable. Share your idea on products or services, such as improved tools, ecological cleaning agents, ecological textiles for seat covers!
<b>Keywords</b>	wooden products care & repair, polish, varnish, transport-saving
<b>Comments</b>	Availability to use since 4.4.2018
<b>Form of cooperation</b>	Purchase for end-user
<b>Technical requests</b>	preferred properties include: eco-friendly materials (varnish, polish), economically efficient, reduces transport distances (for furniture from/to premises)
